

BioDay: Trends in Bioinformatics @Hekovnik

Written by Marinka

Thursday, 06 June 2013 20:43 - Last Updated Sunday, 25 August 2013 21:33

In May I participated at the first [BioDay meeting](#) organized by [Hekovnik](#) in Ljubljana, Slovenia. The aim of the BioDay events is the exchange of ideas, knowledge and fostering collaboration and networking between life scientists, computer scientists, bioinformaticians, mathematicians and physicists.

The first event focused on recent trends in bioinformatics, specifically on experimental methods in systems biology (by Spela Baebler, PhD) and biomedical data fusion. I presented the latter topic and discussed how heterogeneous data sources in biology can be collectively mined by data fusion. The video of the event is available at [video.hekovnik.com/bioday_trendi_v_bioinformatici \(in Slovene\)](http://video.hekovnik.com/bioday_trendi_v_bioinformatici_(in_Slovene)).
Enjoy!
