

Recently, I have participated as young researcher in computer science at [Heidelberg Laureate Forum](http://www.heidelberg-laureate-forum.org). I encourage the reader to check recordings of some of the talks, which are available at [official HLF website](http://www.heidelberg-laureate-forum.org/event_2014/). If limited by time I recommend at least one of the following talks by Michael Atiyah, Manuel Blum, Wendelin Werner, Vint Cerf, Leslie Lamport, Manjul Bhargava, Daniel Spielman, Efin Zelmanov or John Hopcroft. They are engaging, full of useful tips and strategies, and should be accessible to an interested listener.

Many CS & Math bloggers followed the event, their comments and discussions about laureates' talks can be found at [HLF Blogs](http://www.heidelberg-laureate-forum.org/blogs/). Among others, [our poster](http://www.scilogs.com/hlf/an-engaging-poster/) has been highlighted by [John D. Cook](http://www.scilogs.com/hlf/author/cook/). Overall, HLF has been an awesome experience for me with many opportunities to network with Turing, Fields, Abel and Nevanlinna laureates and meet other young researchers in computer science and mathematics from around the world.
