

I have been selected to participate as young researcher in the [Heidelberg Laureate Forum 2014 \(HLF\)](#) . The Forum will

take place in September and will bring together winners of the

[Abel Prize](#)

and

[Fields Medal](#)

(mathematics) as well as the

[Turing Award](#)

and

[Nevalinna Prize](#)

(computer science) with young researchers from around the world selected by an international committee of experts primarily from the award granting organizations. I was fortunate and was given an opportunity to be one of 200 young researchers (there are 100 spaces for each discipline of mathematics and computer science) that will be part of this Forum.

The HLF is an event inspired by Lindau Nobel Laureates Meetings, which provide a forum where people dedicated to science, both role models and young researchers in physics, chemistry and life sciences, can interact. This event [spawned an idea](#) to create something similar for scientific disciplines of mathematics and computer science.

[The list of participating Laureates](#)

is impressive and includes, among others,

[Manuel Blum](#)

,

[Stephen Cook](#)

,

[Antony Hoare](#)

,

[John Hopcroft](#)

,

[Leslie Lamport](#)

,

[John Torrence Tate](#)

and

[Wendelin Werner](#)

. I am looking forward to meet these distinguished experts from both disciplines and learn many new things.
